I am building an excel WB on Windows 7 and Excel 2010 I'm just starting to use SQL and need to use the microsoft activex data objects library.. Its primary benefits are ease of use, high speed, low memory overhead, and a small disk footprint.. I see in my References dropdown various versions of it 2 1 thru 2 8 and 6 1 I'm trying to figure out which one to use. [Dragons Dogma](#)
